

Suprateg-P

The same support for healthy fish
fish eggs in a convenient powder

Recommended Use:

For maintaining optimal health of fish
and fish eggs.

Preparation:

- Dilute 1 gram of Suprateg-P powder
in a litre of clean water to create
working solution.

Directions for Use:

For Fish

- Apply 60 to 80 $\mu\text{L/L}$ (ppm) of working
solution for up to 1 hour in fish tanks.
- 70 ppm = 1 litre of working solution
per 10,000 litre tank.

For Fish Eggs

- Apply 600 to 800 $\mu\text{L/L}$ (ppm) of
working solution for 1 hour to egg
treatment tank.
- Repeat 2-3 times a week, or as
necessary.

Storage:

Store at room temperature in a closed
container for 3 year in a dry area away
from humidity.

Suprateg[®]

Suprateg-P is the powder form of Suprateg[™], an easy to
use veterinary health product made entirely from plant
materials that supports healthy fish and fish eggs. It is a
safe, sustainable and cost-effective product for
maintaining optimal fish health in aquaculture operations.

The concentrated powder allows for easier transport,
storage and handling with all the same benefits of the
liquid version of Suprateg[™]. When you're ready to use,
the powder is easily diluted into a working solution.

Suprateg[™] is a non-toxic natural product that has no
adverse effects on human or fish health. It allows
commercial fish farms to produce healthy food in a safe,
environmentally friendly manner.

SUPRATEG IS PROPHYLACTIC
NOT TREATMENT

Made in Canada

Suprateg®

The first, and currently the only, natural fish health product to receive approval through the Low-Risk Veterinary Health Products notification program of Health Canada.

Suprateg™ is an easy to use veterinary health product made entirely from plant material that supports healthy fish and fish eggs. It is a safe, sustainable and cost-effective solution for maintaining optimal fish health in large aquaculture operations.

General indication of use:

Preventive routine baths.

Suprateg is prophylactic not a treatment. One can keep the fish health, out of infections by using this product

FAQs:

•Minimum requirements of the medium:
have adequate oxygen saturation prior to bathing and keep it stable.

•Ideal product storage requirements:
A dry place at room temperature.

•What is the suggested dose for fish?
12.5-20 ppm.

•What is the suggested dose for eggs?
120 ppm

•Does Suprateg require Veterinary Medical Prescription (PMV) to indicate its use?
No. Since it is a water conditioner with no therapeutic indication

•Can Suprateg be used in RAS? Does it have any interaction with the biofilter?
Yes, it can be used. According to tests carried out by the Canadian supplier, there are no adverse effects on the biofilter

•Is it possible to use more than 20 ppm?
Although the maximum dose indicated is 20 ppm or ml/m3, there are no negative effects from using a dose higher than this

•How long can fish be exposed to Suprateg?
The suggested minimum is 1 hour, however, if the density and abiotic conditions allow it, they can remain for longer.

•At what stage can it be used?
Eggs - Fingerlings with sack - Fingerlings Presmolt - Smolts - Broodstock
Use continuous dip for the eggs.

•Is it a biodegradable product?
100%.

•Can it be mixed with other chemicals?
Interactions with other chemicals such as formalin, salt, or bronopol are not expected

•What reaction in the fish is expected during the bath?
The fish should not alter their natural behavior during or after bathing, since Suprateg does not have irritating or sedative characteristics that can alter the behavior of the fish.

•Is it possible to use Suprateg in fish with a clearly developing mycosis?
Yes, it can be used, but we do not expect to achieve curative results or destruction of the infestation.

•Is there a limit of baths per week to perform?
3 to 4 is enough.

•Does Suprateg have an effect on other pathologies?
Can keep gills safe/can keep skin/ infected skin fresh.

•Can Suprateg be used after cloudy?
Yes.

•Can Suprateg be used in conjunction with other water conditioners such as Protect Fish?
Yes, especially in smolts that are already in the transfer window and are exposed to mucus losses.

•Can Suprateg be used in groups of fish that are receiving any medicated feed?
Yes

•when is Suprateg NOT recommended?
When the infection level/mortality is high.
